- Jig holes:** OUT = outer ring, IN = inner ring, ODD = innermost ring. On the ODD ring the characters sit so close that only odd positions (1, 3, 5 ...) are stamped. Use it to label the washer side: 1/2 and 2/2, or for a multisig wallet A1, A2, B1, B2, C1, C2 (key A, B, C; side 1 or 2).
- One letter per box, starting in the first box; leave unused boxes empty. The small numbers are the stamp positions on that ring (9 per word, 54 per ring).
- Fill this in offline, check every word against the BIP39 list, and destroy the form after stamping. Never photograph it.
